

Blockchain, Trust and Talent for the **Digital Age**

Valerie Thomas

Lead, Talent Mobility Strategy

Talent Cloud

Government of Canada

@valremix

Government needs a talent model designed for the **Digital Age**...
Faster, more versatile, and able to deal with more volatile economies.

Rise of non-traditional employment (gig and platform economies)

Rapidly evolving technologies and corresponding skills

Diminished value of the traditional social safety net for workers

Increased need for inclusive, diverse workplaces

People are **acquiring skills differently**.
Learning is happening everywhere.

Old economic models aren't able to **see** and **use** this new talent source efficiently, despite an increasingly critical need to fill talent gaps.

The Government of Canada's **current hiring model** does not meet the emerging needs of today's talent.

Billions of dollars spent
on Temp Agencies and staffing
through procurement (at a 20-50%
mark-up with no benefits to workers)

Weak signals

No easy way exists for
individuals to record and
showcase a real-time
account of their ever-
evolving skills.

Thousands of hours

re-validating credentials and skills
(i.e. university degrees, security etc.)
for each new job

It's time to **reinvent** the hiring model for the Digital Age.

To **keep pace** in a Digital Age, Government has to be able to :

Know what people are capable of

Be able to trust skills claimed by applicants

Be able to find, match and see talent differently

Mobilize and restructure rapidly

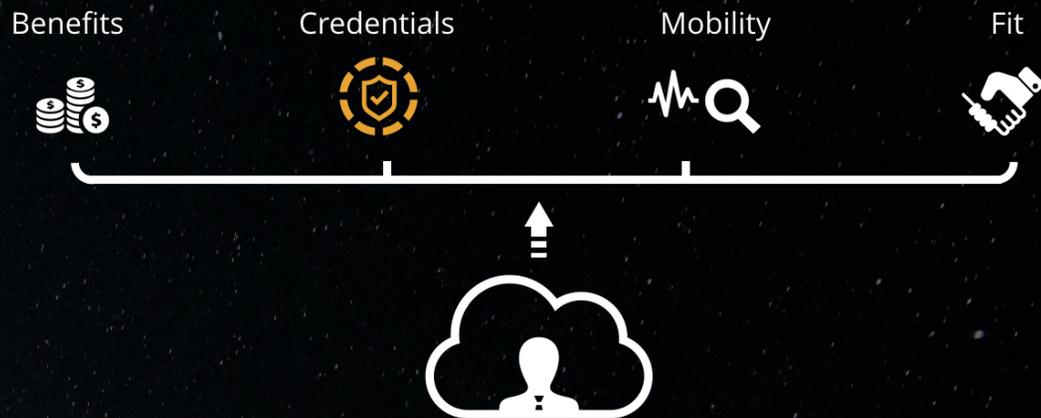

Protect the social contract between workers and Government

When we **let go** of old ways or working, what comes next?

Introducing  GC **Talent Cloud** 

The world's first public sector talent marketplace optimized for "gig" work, complete with rights, benefits, union representation and a new credential recognition engine for employment.

On Talent Cloud, you can move easily from job to job, build your credentials, choose meaningful work and receive benefits.

A **new talent marketplace** optimized for the Digital Age also needs a **new talent currency**. Announcing...

GC Talent Cloud Blockchain pilot

Any credential (academic, professional certifications, work records etc.)

To be verified on any device (smartphone, web etc.)

From anywhere in the world.

While contributing to the global trust economy.

These validated blockchain credentials can then be used as a trusted digital credential across the **private, non-profit, academic and public sectors.**

A new trusted digital credential

Opening up possibilities for a whole new level of automation and trust in the hiring process.

This is part of the Government of Canada's broader commitment to digital government, and is being built in line with our new **Digital Standards**.

Design with users

Iterate and improve frequently

Work in the open by default

Use open standards and solutions

Address security and privacy risks

Build in accessibility from the start

Empower staff to deliver better services

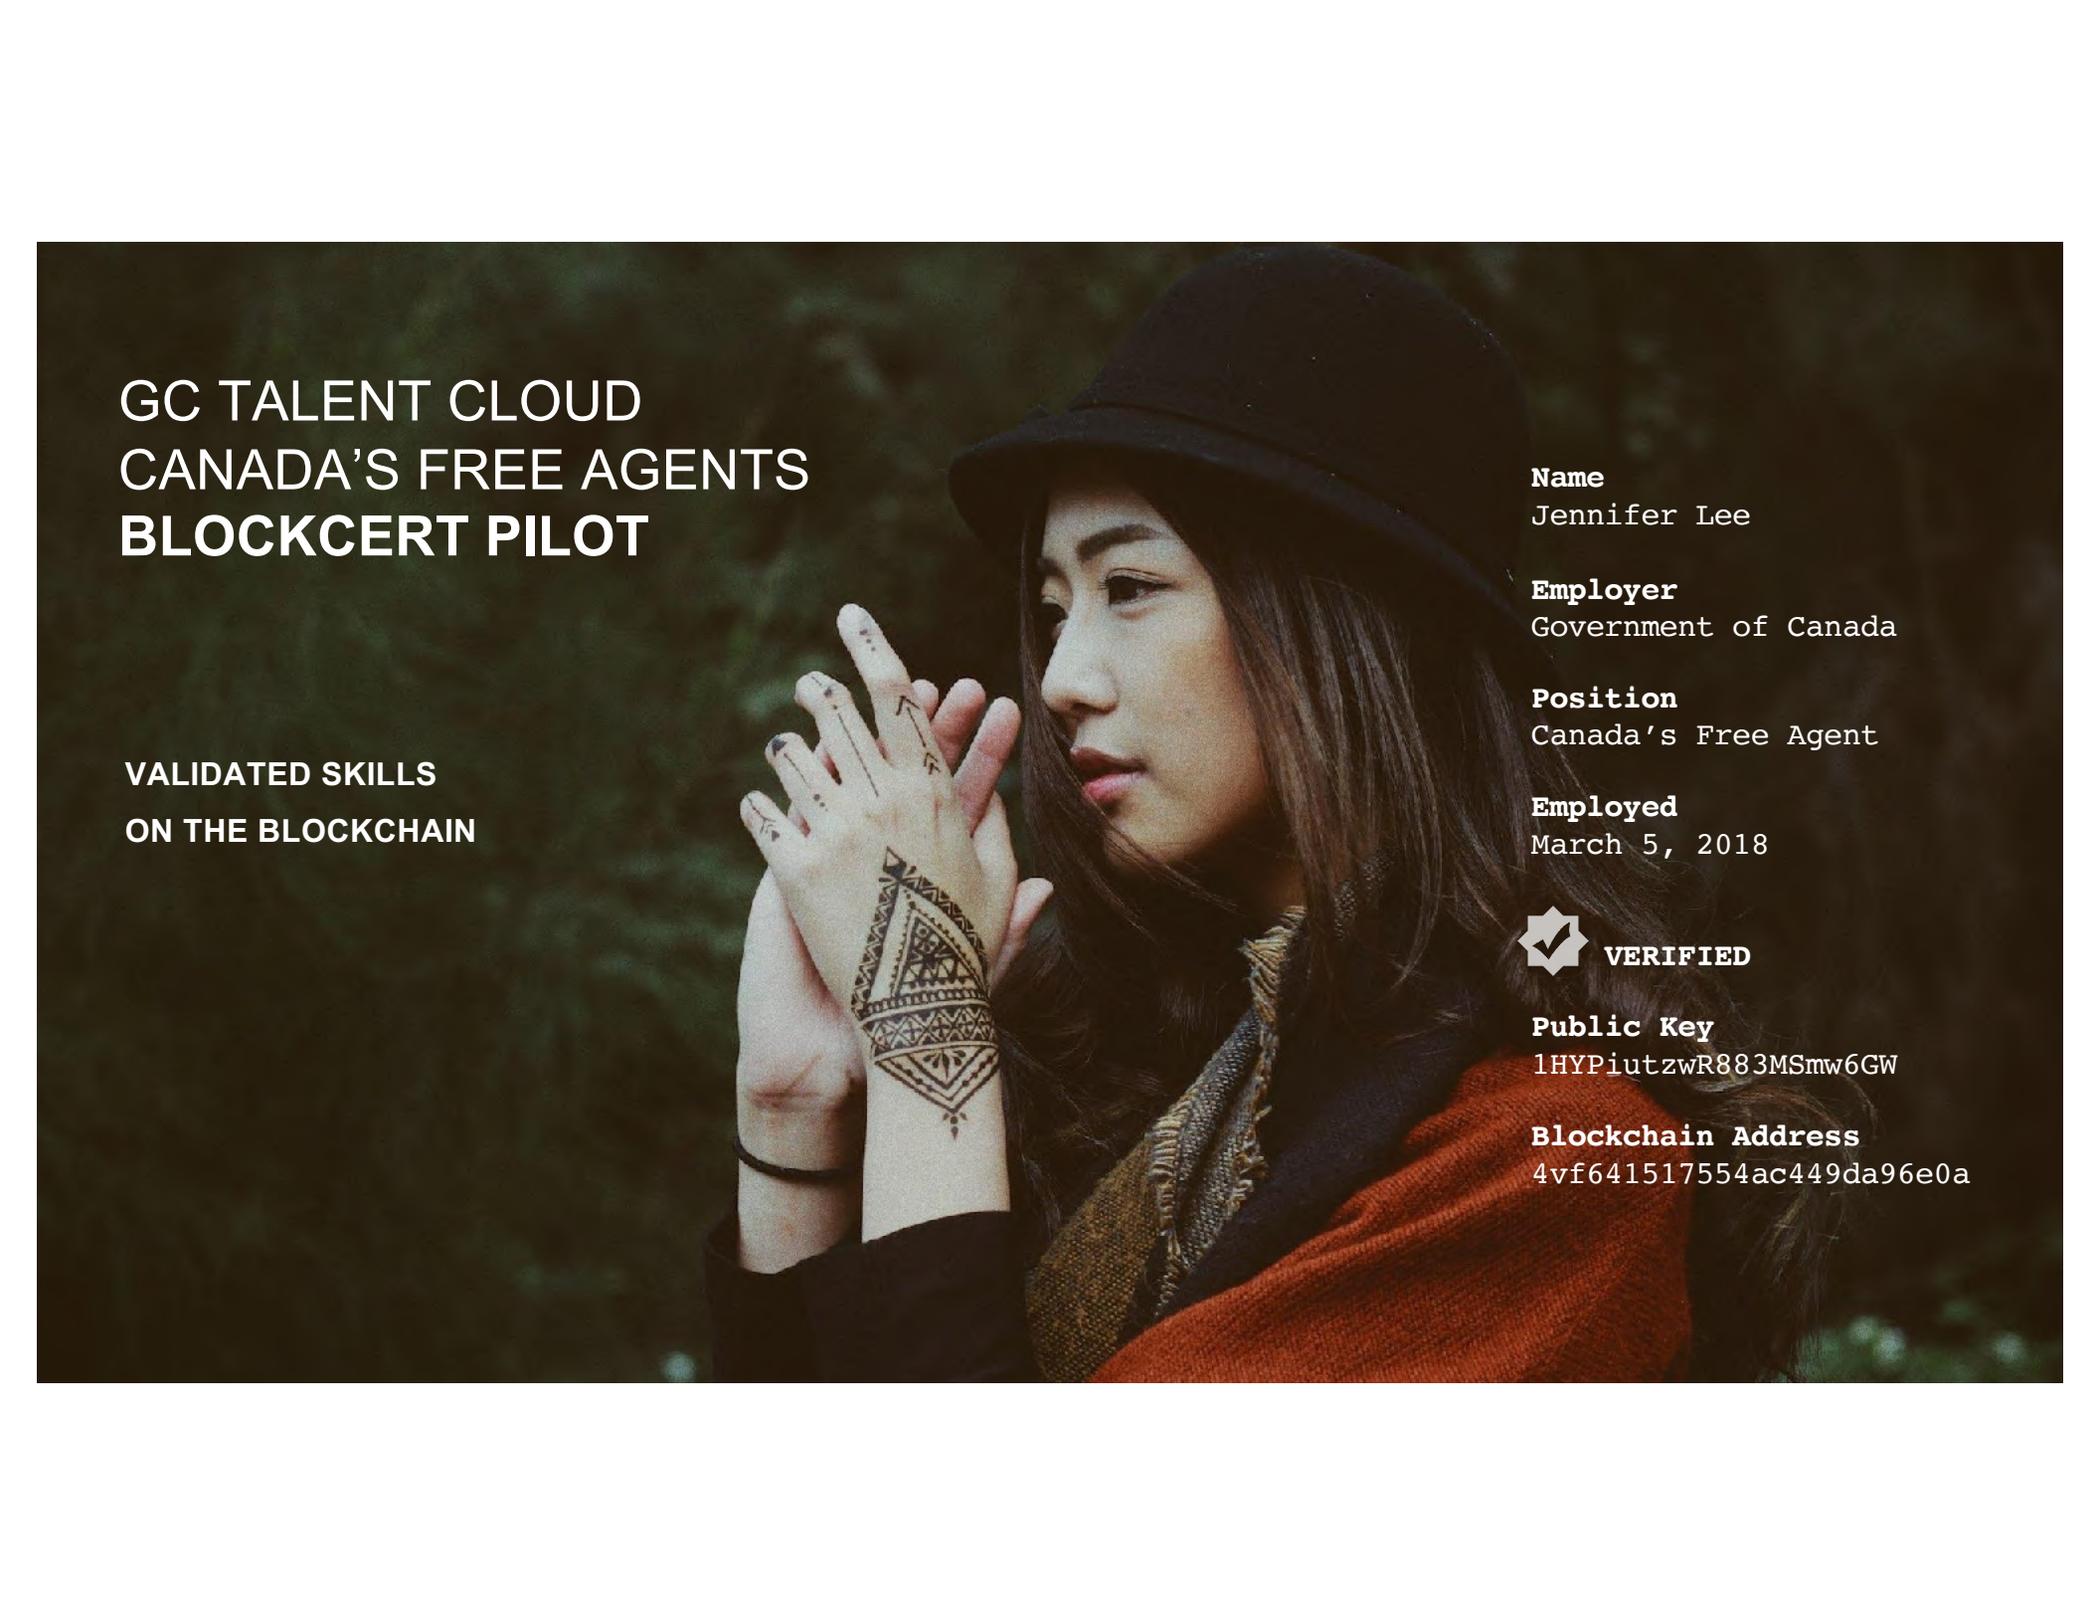

Be good data stewards

Design ethical services

Collaborate widely

Blockcerts Value for Free Agents

Facilitates the creation and curation of a comprehensive record of lifelong achievements.

Free Agents own their Blockcerts and can store, access, and share them wherever they choose.

Free Agents and employers can verify their Blockcerts for life, for free.

Learning Machine and GC Talent Cloud Issue Blockchain Credentials to Canada's Free Agents

PRESS RELEASE UPDATED: JUN 24, 2019

Treasury Board Secretariat issues Blockcerts--self-verifying, recipient-owned digital credentials--to demonstrate proof of qualifications for public service

Brian Double

This is an official certificate of recognition that the individual listed above has been selected as one of Canada's Free Agents for the Government of Canada.

Canada's Free Agent is a Government of Canada program that proposes a new model for workforce mobilization. It offers public servants the freedom to select work that matches their skills and interests and allows them to make a contribution that they find meaningful.

It also supports managers looking to rapidly and easily acquire top talent with emerging and core skills in order to support their short-term project needs. Free Agents are screened for attributes that are beneficial for solving problems and skills that are in demand.

Attributes Assessed:

Action-Oriented | Agile | Courageous | Creative | Curious | Effective
Written Communication | Empathetic | Humble | Imaginative |
Networked | Outcomes-Focused | Passionate | Persuasive | Problem
Solver | Quick Learner | Reflective | Resilient | Team-Oriented

Securing the future of talent mobility in the Government of Canada

Category: [Digital](#)

May 30, 2019

Follow:    

It's an exciting time for digital government in Canada. While we're still in the early stretch of 2019, we have continued to advance the digital government agenda including, releasing the [Directive on Automated Decision Making](#) and more recently, hosting the [Open Government Partnership Summit](#), to explore how digital technologies have reduced barriers and offered government's new opportunities to rebuild their relationship with those they serve.

Canada pilots blockchain staff records

By Natalie Leal on 17/06/2019

Alex Benay describes his time as CIO at the Government of Canada as "one heck of a ride" and says he is proud of what he and his colleagues have achieved in moving the national digital agenda forward.

The Government of Canada (GC) is using blockchain technology to issue project-based employees with a kind of digital CV, providing "a permanent, self-owned and secure record of their skills and experiences."

McMaster becomes the first major institution to offer digital degrees

More than 940 undergraduate engineering, Bachelor of Technology and computer science students will receive McMaster's first-ever digital diplomas the week

Blockcerts can be used as proof of education when applying on GC Talent Cloud

Step 2 / 6

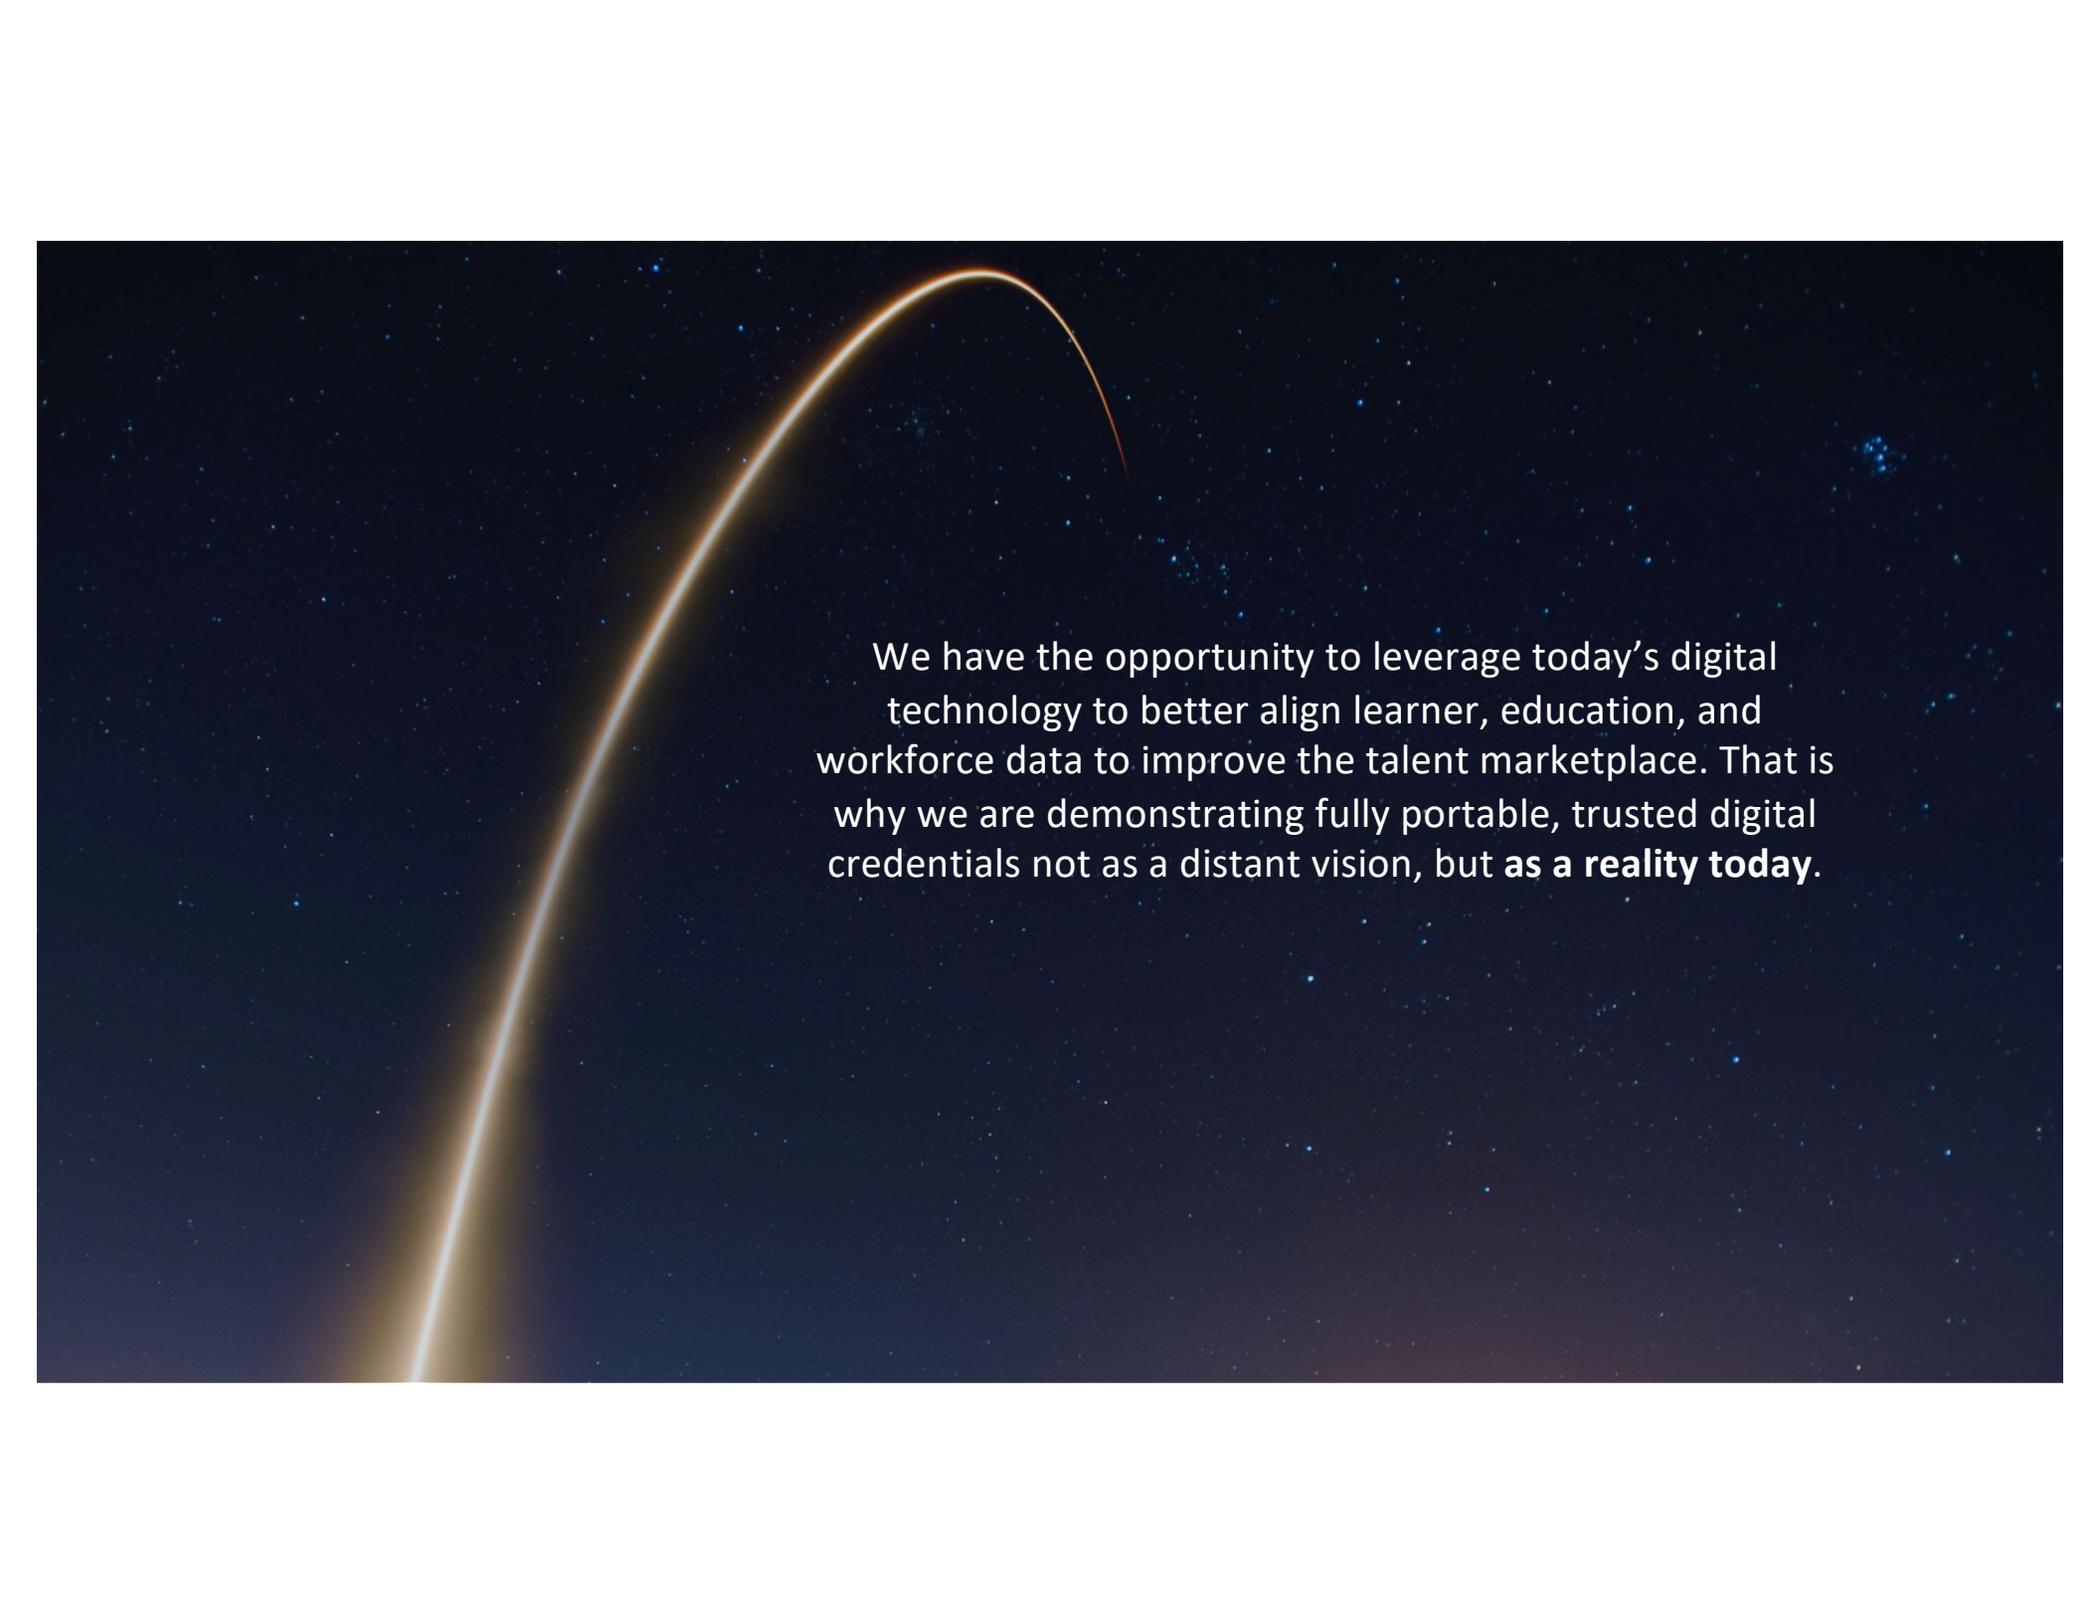

New Diploma/Degree

Type Select a degree type...	
Area of Study	Institution
Thesis Title (Optional)	Blockcert Link (Optional)
Start Date 2019-08-06	End Date 2019-08-06

Delete Diploma/Degree

Save Diploma/Degree

A glowing orange arc, resembling a comet or a celestial path, curves across a dark blue night sky filled with numerous small, bright stars. The arc starts from the bottom left and curves towards the top center, then descends towards the right. The text is centered in the lower right portion of the image.

We have the opportunity to leverage today's digital technology to better align learner, education, and workforce data to improve the talent marketplace. That is why we are demonstrating fully portable, trusted digital credentials not as a distant vision, but **as a reality today.**

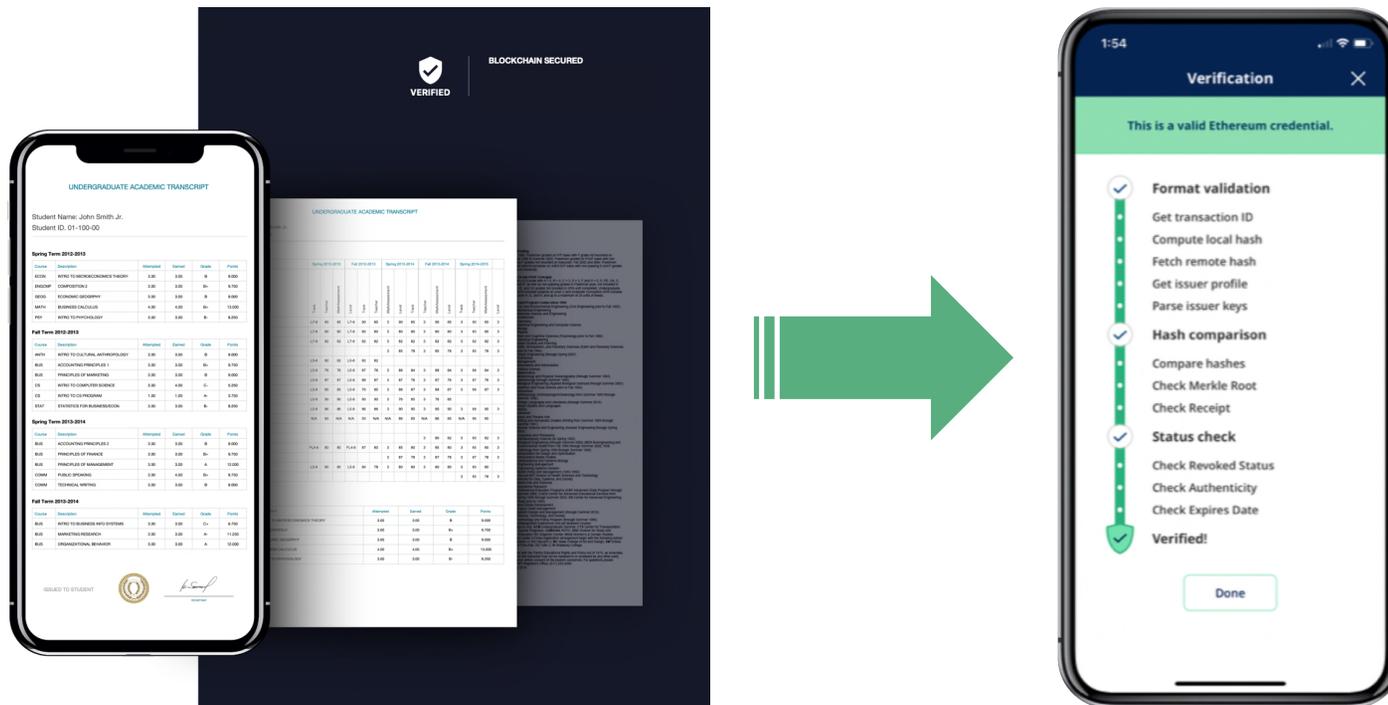

The Solution

Official documents as software — digital credentials that are, recipient owned, vendor independent, tamper evident, human & machine readable, verifiable, and a new source of analytics.

Complex Data, Fast Verification Proofs

Transfer complex data directly from Databases to Credential Templates. Recipients control where credentials are shared. Verification proofs via phone, web, or integrated app within a couple seconds.

Blockcerts Project Value for GC Talent Cloud & Free Agents

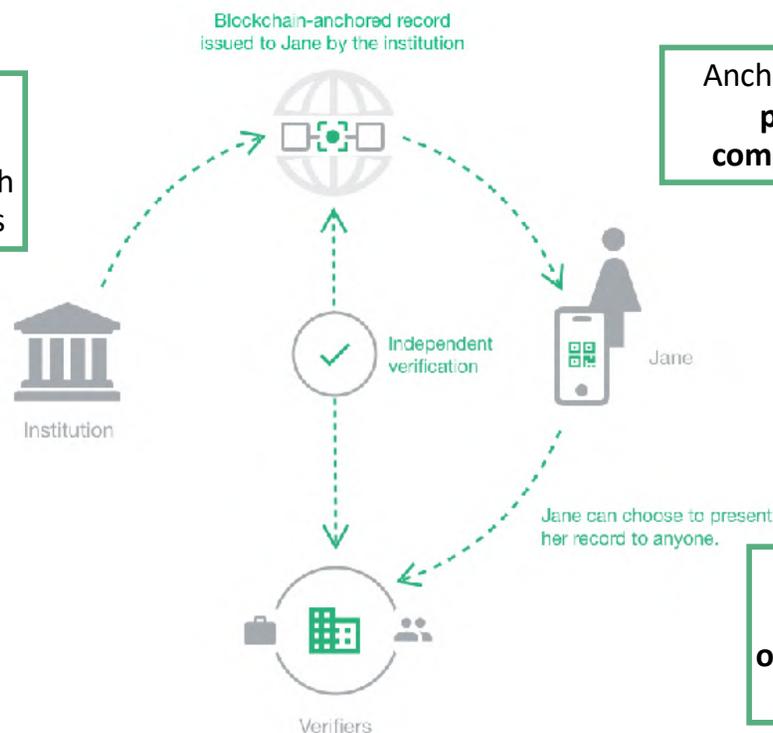

Using Blockcerts (blockchain-anchored credentials) open standard for records verification has major benefits because it realizes the full value of blockchain technology, ensures vendor independence, and allows people to directly own their digital assets for life.

- Joint Record Ownership ● GC Talent Cloud and Free Agents jointly own Blockcerts and can store, access, and share them wherever they choose, with no ongoing dependence on Learning Machine.
- Vendor-Independent Verification ● Any third party can verify these Blockcerts for life, also with no ongoing dependence on Learning Machine.
- Portability & Interoperability ● Using standard, non-proprietary data formats means anyone can view & verify records without specialized software.
- Privacy & Control ● Record owners have full discretion over where and how they display and share their credentials. Free Agents have sole access to their Blockcert Wallets.
- Multiple Blockchains ● GC Talent Cloud is not limited to using one blockchain with Blockcerts. Over time, multiple blockchains could be added, including both public and private networks.

Open Standards & Security

A commitment to open standards and methods ensures interoperability, portability, recipient ownership, and credential security.

Conforming to Open Badges and Verifiable Credentials ensures **interoperability and portability** with other credential vendors & verifiers

Anchoring to blockchain enables **protection** if Issuers are **compromised or cease to exist**

Recipient keys and Decentralized Identifiers provide **individual ownership, recipient authentication, and privacy protections**
